

ENTREPRENEURSHIP WORLD CUP 2026 — APPLICATION DRAFT

Platform: AgriLink

Portal: entrepreneurshipworldcup.com/apply-form/ (equity-free, no application fee, rolling review) **Track:** Early Stage (\$200k / \$150k / \$90k / \$50k) — AgriLink has a live working product + white paper + pitch deck, so Early Stage fits better than Idea Stage. AI Infrastructure & Platforms sub-track (\$50k) may also be selectable as a secondary category given the AI-driven matching engine — select both if the form allows multiple track tags.

Company / Team Information

- **Company name:** ZeroPay Digital Services Ltd (UK entity, incorporation filing scheduled — parent umbrella for AgriLink and 6 other platforms). Currently operating under BETONIQ WEST LTD (RC 1496603, Nigeria) while UK incorporation completes.
- **Product name:** AgriLink
- **Website / Live demo:** <https://tomdeggs.github.io/BETONIQ-WEST-/zeropay-digital-services-ltd/live-apps/agrilink.html>
- **HQ country:** Nigeria (Abuja) — team based in Nigeria; UK entity being established in parallel.
- **Sector:** AgriTech / Food Security / Supply Chain
- **Founded:** 2026
- **Team:**
 - Tom Ugbodaga — Shareholder & CEO. MSc Computer Systems Security (University of Gloucestershire, England, 2011). LinkedIn: [linkedin.com/in/tomdeggs-ugbodaga-2306692bb](https://www.linkedin.com/in/tomdeggs-ugbodaga-2306692bb)
 - Air Vice Marshal Monday Riku Morgan (Rtd) — Executive Vice Chairman, board authority and signatory.

One-line pitch

AgriLink is a live AI-driven matching engine that connects smallholder farmers directly to buyers using real geolocation and freshness-decay logic — cutting the food that never reaches a market before it spoils.

Problem

One third of all food produced on Earth is lost or wasted every year, while over 700 million people go hungry. In emerging markets, most of that loss happens between the farm gate and the first buyer — farmers can't find buyers fast enough before

produce spoils, and buyers can't find nearby fresh supply. This is a logistics and information failure, not a production failure.

| Solution

AgriLink runs a real-time matching engine that scores every farmer-buyer pair on geolocation proximity and a freshness-decay curve specific to each crop, surfacing the highest-value match before spoilage risk rises. The full matching logic runs live in the browser — no backend round-trip needed for the core scoring demo — making it deployable on low-cost devices with intermittent connectivity, the exact conditions most smallholder farmers operate under.

| Traction / proof of execution

- Live interactive demo (linked above), fully functional, testable in-browser today
- Complete technical white paper and investor/partner pitch deck (PDF), both published
- Part of a coordinated 7-platform African tech portfolio (AgriLink, CivicTrack, TriageAI, LearnOffline, SafeGuard, ChipLink, CineLink) under one umbrella entity, each independently built and demoed
- Pre-revenue, pre-seed stage — this application is being used deliberately as a proof-of-execution vehicle, not a paper idea

| Business model

Freemium marketplace: free tier for farmer listing and basic matching (accessibility-first, no barrier to entry); premium tier for buyers wanting priority matching, bulk sourcing tools, and verified-supplier badges. Take-rate assumption: a small transaction fee on completed matched trades once payment rails are integrated (rate to be finalized during pilot phase — no live transaction volume yet, so no revenue table is being presented at this stage).

| Funding ask / use of funds

Requesting EWC prize funding to: (1) run a pilot in one Nigerian agricultural hub with real farmer/buyer onboarding, (2) integrate live payment settlement, (3) cover UK entity compliance costs for ZeroPay Digital Services Ltd once incorporated.

| Market

Nigeria alone loses billions of dollars annually in post-harvest food waste; the addressable market spans every smallholder-farmer economy in Sub-Saharan Africa and beyond.
