

ENTREPRENEURSHIP WORLD CUP 2026 — APPLICATION DRAFT

Platform: SafeGuard (Scam Shield + child-safety module)

Portal: entrepreneurshipworldcup.com/apply-form/ (equity-free, no application fee, rolling review) **Track:** Early Stage (\$200k / \$150k / \$90k / \$50k) — live product, white paper, pitch deck already built. AI Infrastructure & Platforms sub-track (\$50k) selectable as secondary category if the form allows multi-select.

Company / Team Information

- **Company name:** ZeroPay Digital Services Ltd (UK entity, incorporation filing scheduled — parent umbrella for SafeGuard and 6 other platforms). Currently operating under BETONIQ WEST LTD (RC 1496603, Nigeria) while UK incorporation completes.
- **Product name:** SafeGuard (internal scam-detection module branded "Scam Shield")
- **Website / Live demo:** <https://tomdeggs.github.io/BETONIQ-WEST-/zeropay-digital-services-ltd/live-apps/safeguard.html>
- **HQ country:** Nigeria (Abuja) — team based in Nigeria; UK entity being established in parallel.
- **Sector:** Trust & Safety / Consumer Protection / Child Safety Tech
- **Founded:** 2026
- **Team:**
 - Tom Ugbodaga — Shareholder & CEO. MSc Computer Systems Security (University of Gloucestershire, England, 2011). LinkedIn: [linkedin.com/in/tomdeggs-ugbodaga-2306692bb](https://www.linkedin.com/in/tomdeggs-ugbodaga-2306692bb)
 - Air Vice Marshal Monday Riku Morgan (Rtd) — Executive Vice Chairman, board authority and signatory.

One-line pitch

SafeGuard is a free, evidence-based scam and child-safety scanner — its Scam Shield engine flags fraudulent messages, links, and payment requests in real time, with a companion anonymous-reporting channel built specifically for child-safety incidents.

Problem

Scam and fraud attempts (fake job offers, phishing links, fraudulent payment requests) disproportionately target people with the least access to verification tools, and children are frequently exposed to unsafe contact online with no low-

friction way to report it anonymously. Existing solutions are either paywalled, enterprise-only, or don't work in low-connectivity regions.

| Solution

SafeGuard's Scam Shield module runs real-time, evidence-based scanning of suspicious messages, links, and payment requests directly in-browser, giving an instant risk verdict backed by explainable evidence rather than a black-box score. Alongside it, an anonymous-contact protocol lets a child or vulnerable user flag an unsafe interaction without exposing their identity, routing it to a moderation/response pathway. Both pillars are built free-tier-first, with premium tiers reserved for organizations needing bulk scanning, API access, or dashboarding.

| Traction / proof of execution

- Live interactive demo (linked above), fully functional, testable in-browser today
- Complete technical white paper and pitch deck (PDF), both published
- Part of a coordinated 7-platform African tech portfolio (AgriLink, CivicTrack, TriageAI, LearnOffline, SafeGuard, ChipLink, CineLink) under one umbrella entity
- Commitment made (per internal policy) to open-source the anonymous-contact protocol within 6 months of any funding secured — SafeGuard has also been flagged as a fit for UNICEF Venture Fund's open-source frontier tech call
- Pre-revenue, pre-seed stage — this application is a proof-of-execution vehicle, not a paper idea

| Business model

Free tier: unlimited scam/link scanning and anonymous child-safety reporting for individual users — this stays free permanently, by design, since accessibility is the point. Premium tier: organizations (schools, NGOs, telcos) pay for bulk scanning API access, real-time dashboards, and case-management tooling. No live revenue yet — take-rate/pricing to be finalized during pilot phase, so no financial projection table is included at this stage.

| Funding ask / use of funds

Requesting EWC prize funding to: (1) run a pilot with one school district or NGO partner on the child-safety reporting pathway, (2) expand the Scam Shield detection database with more real-world fraud patterns, (3) cover UK entity compliance costs for ZeroPay Digital Services Ltd once incorporated.

| Market

Every internet-connected population is a potential Scam Shield user; the child-safety reporting pathway addresses a global gap in low-friction, anonymous incident reporting for minors.
