

BETONIQ WEST LTD

Self-Sufficiency Manual — GitHub, Netlify, Twilio

Purpose: everything the AI agent does on these 3 platforms, written so Tom can do it himself without any assistant involvement if Base44 becomes unavailable.

1. GitHub — github.com/TOMDEGGS/BETONIQ-WEST-

This is the single source of truth for every HTML demo, PDF, white paper, and markdown file.

1. Log in at github.com with the TOMDEGGS account (linked to betoniqwestltd@gmail.com).
2. Open the repo:
github.com/TOMDEGGS/BETONIQ-WEST-
3. **Edit an existing file (no command line needed):** open the file in the repo view, click the pencil/edit icon top-right, make the change, scroll down, write a short commit message, click "Commit changes."
4. **Add a new file:** inside the repo, click "Add file" then "Upload files," drag the file in, write a commit message, click "Commit changes."

5. Get a shareable link to any file: open the file, click "Raw," copy that URL. That's the raw.githubusercontent.com format used everywhere in this project.

6. For interactive HTML demo pages specifically: a raw link just shows code, not a working page. To make it open as an actual webpage, prefix it: [htmlpreview.github.io/?\[raw link\]](https://htmlpreview.github.io/?[raw link]).

7. If you ever need real command-line git (bulk multi-file changes): go to Settings, Developer settings, Personal access tokens, generate one, use it as the password when git prompts for authentication. But the web upload/edit above covers the vast majority of real use cases.

2. Netlify — netlify.com

This hosts the live public websites (no login required for visitors).

1. Log in at netlify.com with betoniqwestltd@gmail.com.
2. Two live sites on the dashboard: the primary website (zeropay-betoniqwest.netlify.app) and the Master Hub launcher (betoniqwestmasterhublivedemos.netlify.app).
3. Click a site name, then the "Deploys" tab shows every version ever published.

4. **Two ways to update a live site:** (a) if the site is linked to the GitHub repo, any file change on GitHub auto-triggers a redeploy — nothing to do on Netlify itself; (b) manual deploy — drag a folder of files straight onto the deploy area on the Deploys page, Netlify publishes in seconds.

5. Custom domain settings (e.g. pointing zeropay.site) live under "Domain management" on that site's page.

6. **Cost caution:** roughly 100 free build credits remain across all these sites combined. Do not redeploy or touch settings unless genuinely necessary — each deploy uses up part of that budget.

3. Twilio — console.twilio.com

This is what would carry WhatsApp messages to the backup AI agent if Base44 goes down.

1. Log in at console.twilio.com.

2. Account SID: visible on your Twilio Console dashboard homepage (starts with "AC..."). Not fully secret, but no need to paste it anywhere public either — just glance at it there when needed. The Auth Token shown next to it on the dashboard IS a real secret — never share or paste that anywhere public.

3. Find the WhatsApp number's settings: Messaging (left sidebar), Try it out, Send a WhatsApp message (sandbox),

or Messaging, Senders, WhatsApp senders (if a dedicated approved sender exists).

4. The critical field is "When a message comes in" — this is the webhook. Paste in: <https://betoniqwest-ai-agent-777-c4728734.base44.app/functions/whatsappBackupAgent> — set the method to POST, then save.

5. Once saved, any WhatsApp message sent to that Twilio number is automatically forwarded to the backup AI agent — no further Twilio secrets needed, it just receives the message and sends back a reply.

6. **To test:** send a WhatsApp message to the Twilio number and confirm the backup agent replies.

Summary

If Base44 is ever unavailable: GitHub holds every file, Netlify serves the live public sites from those files, and Twilio plus this webhook keeps a working AI conversation going via WhatsApp using the Master Briefing Document as its knowledge base. All three are things Tom can operate directly through their own web dashboards — no developer skills required for the day-to-day tasks above.

BETONIQ WEST LTD - RC 1496603 - Self-sufficiency manual, for Tom's independent reference.
