

THE 77 GOLF & COUNTRY ESTATE — INVESTMENT CASE AT A GLANCE

Bwari, Abuja FCT | Prepared for the Chairman, Air Vice Marshal Monday Riku Morgan (Rtd) | September 2026

STRICTLY PRIVATE & CONFIDENTIAL 2-PAGE SUMMARY OF FULL 27-PAGE BUSINESS PLAN

"Live on the Greens, Work in Comfort, Heal in Serenity and Relax in Luxury."

77 ha

Total Land Size

₦50B

Revenue Target

₦17.5B

Stated Project Cost

≈186%

Return on Investment

WHAT THIS PROJECT IS

A luxury golf-anchored estate in Bwari, Abuja — a real 18-hole golf course, 100 luxury 4-bedroom duplexes, a hotel, a shopping village, a hospital, and an international school, all in one gated, secured community. Early cash comes from selling serviced land plots first — that money then builds the golf course and clubhouse, so the project largely funds itself as it grows.

WHY THE NUMBERS WORK

How the 77 Hectares Are Used

- **We only need to sell land, not build first.** Just selling site-and-serviced plots on the 22-hectare residential zone raises ₦50 billion.
- **Total known cost is far less than revenue.** Land (₦2.5B) + duplex construction (₦15B) = ₦17.5B stated cost, against ₦50B revenue.
- **Even with a huge safety buffer, it still works.** Adding up to ₦24.17B more for golf course, clubhouse and infrastructure still clears the 20% minimum return target.
- **Everything else is pure upside.** The 100 duplex sales, hotel, shopping village, hospital and school income are not even counted here.

THE MONEY, IN PLAIN TERMS

How ₦50 billion in revenue covers costs and still leaves a large profit — and what happens if things go wrong.

Term	What it means in plain language
Revenue	Expected money from selling land plots — ₦50B, based on a real benchmarked price of ₦100M per 500 sqm plot (₦200,000/sqm).
Stated Cost	What we know for certain we must spend: land (₦2.5B) + duplexes to shell stage (₦15B) = ₦17.5B.
Cost Buffer	Extra safety cushion of up to ₦24.17B for the golf course, clubhouse & infrastructure — even fully spent, it still clears the 20% floor.
ROI	Return on Investment. ≈186% means every ₦1 spent returns roughly ₦2.86 — a very strong result by real estate standards.

WHAT IF THINGS DON'T GO PERFECTLY?

This grid tests selling only part of the land (rows) AND costs running higher than planned (columns). Green = still profitable, Yellow = breakeven-ish, Red = loses money. Even selling only 80% of the land at double the stated cost, the project is still roughly break-even.

Stress Test: ROI Under Worse-Case Scenarios (Green = Profit, Yellow = Breakeven, Red = Loss)				
Revenue Achieved	Stated ₦17.5B	+50% ₦26.25B	+100% ₦35B	Max Buffer ₦41.67B
