

CBN SANDBOX APPLICATION — ANSWER KEY (Application SB2026001125)

Company: BETONIQ WEST LTD | Product: ZeroPay | RC: 1496603

Use this as a copy-paste reference for remaining sections (04-31). Sections are grouped by likely CBN sandbox category — match to whatever heading is showing on your screen and paste the relevant block.

COMPANY TYPE & OWNERSHIP

- Legal structure: Private Company Limited by Shares
- Incorporation date: May 20, 2018
- Registration number: RC 1496603
- Registered address: D26 Flat 1, 25th Street, AMAC, FCT, Abuja, Nigeria
- Ownership: Tom Ugbodaga holds 51-75% shareholding
- Board: Tom Ugbodaga (Shareholder & CEO), Air Vice Marshal Monday Riku Morgan (Rtd) (Exec Vice Chairman)
- No foreign ownership at this stage
- No subsidiaries or parent company

KEY MANAGEMENT / DIRECTORS

Director 1:

Name: Tom Ugbodaga

Position: Shareholder & CEO (never "Founder")

Email: zeropointfeild_nonwnt@zeropay.site

Qualification: MSc Computer Systems Security, University of Gloucestershire (Merit Class, 2011) —
Dissertation: NFC Contactless Technology for Financial Payments

Director 2:

Name: Air Vice Marshal Monday Riku Morgan (Rtd)

Position: Executive Vice Chairman

Role: Board authority, signatory for major proposals

PRODUCT / SERVICE DESCRIPTION

Product name: ZeroPay

Tagline: "Payments work without the internet. Finally."

Description: An offline-capable payment terminal and settlement protocol layer enabling merchants and consumers in low-connectivity regions to transact securely without live internet access, syncing to licensed payment rails once connectivity is restored.

Service category: Payment Services / Fintech infrastructure (protocol layer, NOT a neobank or standard merchant acquirer)

Target market: Unbanked and underbanked populations — 1.4 billion unbanked globally, 38 million in Nigeria

TECHNOLOGY & SECURITY ARCHITECTURE

Stack: PUF/ECC Terminal -> Offline Cryptographic Token -> Solar Mesh Hub -> Paystack API -> Licensed Microfinance Bank -> IMTO Partner

Security layers (5-layer model):

1. Physically Unclonable Function (PUF) — silicon-level hardware security
2. ECC P-256 elliptic curve cryptographic signing
3. Distance bounding protocol (anti-relay attack protection)
4. Offline cryptographic tokens with 72-hour time-to-live
5. Solar Mesh Hub relay with supercapacitor + lithium battery backup

Patent status: Patent-pending as of April 2026

Clarification if asked about crypto/blockchain: ECC P-256 is standard cryptographic signing (same as used in EMV chip cards and TLS/HTTPS) — NOT cryptocurrency or blockchain-based.

AML / KYC / COMPLIANCE APPROACH

- All transactions settle through a licensed Microfinance Bank partner and Paystack (licensed PSP) — ZeroPay does not hold customer funds directly
- KYC performed by licensed banking partner, not by ZeroPay directly
- Offline tokens are cryptographically bound to a single registered device and expire after 72 hours, limiting fraud exposure window
- Full transaction audit trail synced to licensed rail once connectivity resumes

BUSINESS PLAN / MARKET RATIONALE

- Problem: 1.4 billion people globally, 38 million in Nigeria, remain unbanked largely due to unreliable internet/network connectivity in rural and underserved areas
- Solution: Hardware + protocol layer enabling payments to function fully offline with cryptographic security equivalent to online rails
- Go-to-market: Merchant terminal distribution partnered with licensed PSP (Paystack), starting Nigeria, expanding regionally
- Revenue model: Transaction fee share with licensed settlement partners; hardware/terminal licensing

SANDBOX TESTING OBJECTIVES (if asked what you want to test)

- Validate offline token generation, signing, and settlement reconciliation against CBN transaction reporting standards
- Test data format compliance for the Transactions reporting API (already scaffolded and pending Client Secret activation)
- Demonstrate fraud controls (distance bounding, token TTL) under sandbox monitoring

RISK MANAGEMENT

- Primary risks: token replay attempts, device cloning, sync delay fraud
- Mitigations: PUF hardware binding, ECC signing, 72-hour TTL, distance bounding anti-relay layer
- All settlement occurs through licensed, regulated partners (Paystack + Microfinance Bank) — ZeroPay never directly custodies funds

CONTACT / SPONSOR INFORMATION (recap)
