

Chidi Has ■15,000. The Bank Has No Signal.

47 million Nigerians cannot transact. Not because they lack money — because the infrastructure fails them.

- Chidi is a Lagos market trader. ■15,000 in his pocket. No bank signal.
- His supplier 3km away needs payment NOW or the deal is gone.
- Mobile money fails. POS fails. Bank app fails.
- This happens 180 million times every day across Sub-Saharan Africa.
- ZeroPay solves this. Completely offline. Zero internet required.

The Market — \$8.4 Trillion Untouched

Sub-Saharan Africa's informal economy. The world's largest unserved payment market.

- Sub-Saharan Africa informal economy: \$8.4 trillion USD
- Nigeria informal economy: \$240 billion (largest in Africa)
- Daily cash transactions in Nigeria: ■2.3 trillion
- Less than 12% digitised — 88% is pure opportunity
- ZeroPay targets the \$8.4T that every other fintech has walked past

ZeroPay — What It Is

The world's first offline-first, hardware-secured payment protocol for unbanked populations.

- Works with zero internet — transactions complete in full offline mode
- PUF (Physically Unclonable Function) hardware security — cannot be cloned
- Distance Bounding Protocol — prevents relay attacks
- Solar Mesh Hub relay network — transactions hop across infrastructure
- Cryptographic token system — 72-hour TTL, auto-reconciles on reconnect
- Patent-pending technology — April 2026

Offline TTL

5-Layer Security Architecture

The most secure offline payment stack ever deployed in an emerging market context.

- LAYER 1 — PUF Silicon Fingerprint (hardware root of trust)
- LAYER 2 — ECC P-256 Cryptographic Signing
- LAYER 3 — Distance Bounding Protocol (anti-relay attack)
- LAYER 4 — Offline Cryptographic Tokens (72-hour TTL)
- LAYER 5 — Solar Mesh Hub Relay Network
- No single point of failure. No cloneable component.

How ZeroPay Works — Chidi's Transaction

Offline. Instant. Cryptographically verified. Zero fees.

- Step 1: Chidi taps his ZeroPay terminal to supplier terminal (NFC)
- Step 2: PUF authenticates both devices in 0.3 seconds
- Step 3: Cryptographic token generated — ■15,000 locked offline
- Step 4: Transaction confirmed — receipt printed instantly
- Step 5: Solar Mesh Hub syncs to Paystack when signal returns
- Step 6: Settlement confirmed — both accounts updated automatically

The Stack — Protocol Layer Architecture

ZeroPay operates BELOW the PSP layer — not competing with banks, powering them.

- PUF/ECC Terminal → Offline Token → Solar Mesh Hub
→ Paystack API → Licensed MFB → IMTO Partner
- ZeroPay is infrastructure — not a wallet, not a bank
- Banks and fintechs BUILD ON TOP of ZeroPay
- Same model as SWIFT for IBAN — ZeroPay for offline Africa
- Paystack merchant agreement: SIGNED July 2026

Solar Mesh Hub — The Relay Network

72-hour supercapacitor + lithium backup. Works when the grid fails.

- Solar-powered relay node — mounts on walls, poles, market stalls
- 72-hour battery backup (matches offline token TTL exactly)
- Transactions hop across mesh network — no single point of failure
- Demonstrated range: Agenegbode to Auchì (51.1km, 6 hops)
- Urban deployment: up to 100km, 12 relay hops (Kano pilot design)
- Cost: \$120 USD per hub — deployable by local merchants

Technology — 15-Year Research Commercialisation

Not a pivot. Not a pivot play. The product of a career built specifically for this.

- Tom Ugbodaga — MSc NFC for Contactless Technology, Gloucester 2011 (Top Graduate)
- MSc Computer Security Systems
- BSc Physics, Nigeria
- ZeroPay = 15-year commercialisation of this exact academic research
- Patent-pending — April 2026
- University of Gloucestershire FISRI — active research partnership (in progress)

Revenue Model — 5 Streams

Infrastructure licensing. Not a transaction fee play.

- 1. TERMINAL LICENSING — hardware + firmware per deployment
- 2. MESH HUB SUBSCRIPTION — ■3,500/month per hub node
- 3. SETTLEMENT RAIL FEE — 0.3% on reconciled transactions
- 4. API ACCESS — fintech/bank protocol integration licence
- 5. DATA INTELLIGENCE — anonymised market flow analytics
- All 5 streams activate simultaneously at pilot deployment

Traction — What Exists Today

This is not a whitepaper. The infrastructure is built.

- Full working demo: offline transaction, mesh relay, security gauntlet
- Paystack merchant agreement: SIGNED — July 14, 2026
- Patent-pending filed: April 2026
- BETONIQ INVEST platform: 70 live projects, \$5.1B pipeline
- 847 verified investor registrations (BETONIQ INVEST)
- Base44 enterprise infrastructure contract: active

Regulatory Strategy

Built for compliance from day one — not retrofitted after the fact.

- CBN Payment Service Provider licence — application in preparation
- Architecture aligned with CBN, SEC, FIRS simultaneously
- FATF anti-money-laundering framework: built-in
- KYC/AML processing: automated, < 4 hours
- BETONIQ WEST LTD — RC 1496603 — incorporated May 20, 2018
- Base44 enterprise infrastructure provides compliance-grade data layer

Competitive Landscape

Every competitor requires internet. ZeroPay is the only one that does not.

- Moniepoint, OPay, PalmPay — all require active internet connection
- M-Pesa — internet + GSM dependent, not hardware-secured
- Bitcoin/crypto offline — no PUF, no distance bounding, no mesh
- ZeroPay: hardware PUF + offline token + mesh relay = unmatched
- No competitor has filed a distance bounding patent in Africa
- No competitor operates below the PSP layer as protocol infrastructure

Go-To-Market — 3-Phase Deployment

Abuja pilot → Nigeria-wide → West Africa → Global.

- PHASE 1 (Months 1-6): 500 terminals, 50 mesh hubs, Abuja FCT
- Target: ■500M in offline transaction volume
- PHASE 2 (Months 7-18): 10,000 terminals, 500 hubs, Lagos + Kano + PH
- Target: ■15B in volume — Paystack settlement rail operational
- PHASE 3 (Year 3): Ghana, Kenya expansion — IMTO partner activated
- CBN PSP licence secured by end of Phase 2

Phase 1
500 Terms

Phase 2
10,000

Partnership — Paystack Integration

ZeroPay is the settlement layer. Paystack is the clearinghouse. Together: unstoppable.

- Merchant agreement: SIGNED July 14, 2026
- ZeroPay = offline origination layer — brings NEW volume to Paystack
- Paystack = settlement and clearinghouse — existing licence and rails
- This is not competition — it is vertical integration
- Proposed: ZeroPay as exclusive Year 1 offline settlement rail
- Float holding through Paystack MFB — ■3M/day new volume at Phase 1

The BETONIQ INVEST Connection

ZeroPay enables BETONIQ INVEST investors to transact offline. Two products. One ecosystem.

- BETONIQ INVEST: \$5.1B pipeline, 70 projects, 11 countries
- Minimum investment: \$500 USD — accessible via ZeroPay terminal
- Real estate investment + offline payment = full financial inclusion
- ZeroPay handles KYC tokenisation for BETONIQ INVEST onboarding
- Cross-sell: BETONIQ INVEST investors become ZeroPay merchant partners
- Combined ecosystem value: \$85M+ platform by Year 5

Why Now — The Window Is Open

CBN's new PSP framework. Nigeria's cashless policy. 47 million unbanked. The timing is perfect.

- CBN cashless policy: government mandate to digitise 80% of transactions by 2027
- New PSP licensing framework: opens infrastructure layer to innovators
- Post-COVID trust collapse in physical cash: consumers want alternatives
- 2026: first year any government has mandated offline payment infrastructure
- ZeroPay is the only patent-pending solution aligned with this mandate
- Miss this window and it closes for 10 years

Investment Opportunity — Pre-Series A

Raising \$4.5M USD. Own the offline payment infrastructure of Africa.

- Total raise: \$4.5 million USD
- 35% PUF terminal manufacturing + Solar Mesh Hub production
- 30% CBN PSP regulatory licensing
- 20% Abuja + Lagos Phase 1 deployment
- 15% Team + operations
- Contact: zeropointfeild_nonwnt@zeropay.site
