

BETONIQ INVEST

estate investment marketplace with built-in feasibility scoring and comp

Zeropay Digital Services Ltd — UK subsidiary of BETONIQ WEST LTD (RC 1496603)

The Problem

The African diaspora alone remits over \$95 billion a year to Sub-Saharan Africa (World Bank), and Africa's real estate investment gap is estimated in the hundreds of billions of dollars — yet almost none of that diaspora capital flows through structured, vetted, transparent investment vehicles. Diaspora and international investors who want exposure to emerging-market real estate face a severe information gap: no independent feasibility scoring, no visible regulatory/compliance status, and no standardized way to compare competing projects across countries. Meanwhile, credible local developers struggle to reach global capital because they have no trust-building, investor-grade presentation layer. BETONIQ INVEST closes both gaps in a single marketplace.

How It Works

- Feasibility scoring engine combines market-demand, location, and financial-viability sub-scores into one overall investability score per project.
- Compliance verification layer cross-references every listed project against its regulatory body and license status before it can go live or be marked featured.
- Country macro-data dashboard surfaces real-time GDP growth, inflation, FX rate, and political-stability context alongside every project, so an investor never has to research a market blind.
- Tiered developer-listing model (listing fee + success fee on capital raised) gives the platform a sustainable revenue model independent of any investor-side fee.

Core Data Model

- RealEstateProject — Project details, developer, country/region, total value, minimum investment, target ROI, equity/financing terms.
- Investor — Investor profile, KYC/accreditation status, risk appetite, preferred regions, portfolio size.
- Investment — Individual investment record: amount, equity/profit-share %, status, expected vs actual return.
- FeasibilityStudy — Independent viability scoring: market demand, location, financial viability, ROI/IRR/NPV, overall score.
- ComplianceRecord — Regulatory body, license number, verification status and expiry per project.
- CountryMacroData — GDP growth, inflation, FX rate, political stability, and regulatory environment context per country.
- DeveloperListing — Developer onboarding: listing tier, listing fee, success fee %, total raised.

Security, Privacy & Compliance

- KYC/accreditation status gates access to higher-tier investment opportunities, keeping unverified users on browse-only access.
- A project cannot be marked verified or featured until its ComplianceRecord shows an active, cross-referenced license from the named regulatory body.
- Investor personal and portfolio data is kept separate from public project-browsing data, with role-based access for developers vs investors vs admin.

Market Opportunity & Funder Fit

Global proptech market projected to exceed \$86B by 2032; African real estate investment gap estimated in the hundreds of billions of dollars. Target beachhead: UK/US/EU-based Nigerian and broader African diaspora investors seeking vetted home-market real estate exposure.

Fits fintech/proptech innovation and diaspora-investment funding lines: IFC/World Bank private-sector development programs, UK FCA and CBN regulatory sandbox tracks, EU digital-finance innovation calls, and diaspora-bond-adjacent development finance initiatives.

The Ask

\$250,000 seed extension to scale investor acquisition and developer onboarding across 3 target markets (Nigeria, UK diaspora corridor, UAE), 12 months.
